Linux Supported Kernels

Linux Supported Kernels

This page provides detailed information about all kernels that are supported by kernel mode of the Falcon sensor for Linux.

- Supported kernel details [/documentation/page/cefbaf45/linux-supported-kernels#ydc690a5]: View details about a specific kernel, including a complete list of sensor versions that support the kernel
- Supported kernels overview [/documentation/page/cefbaf45/linux-supported-kernels#k0878820]: View a list of supported kernels in table format, included the first and last sensor versions to support each kernel

> **Important:** This supported kernel information is for kernel mode of the sensor. For information about user mode requirements, see User mode distro and kernel requirements [/documentation/page/edd7717e/falcon-sensor-for-linux-system-requirements#nc904783].

Supported kernel details

To see which Falcon sensor versions support a kernel, select the distro and kernel release in the following lookup:

Select distro: -- Select kernel: -- Reset

The results show the sensor versions that support the specified kernel for each of these support methods:

- **Base Package Supported**: Sensor versions that support the specified kernel in the base sensor package. These sensor versions support the kernel when they are installed.
- **ZTL Supported**: Sensor versions that added support using the zero-touch Linux (ZTL) support method. This method adds support for kernels through channel files without requiring a sensor update.
- **ZTL Module Supported**: Sensor versions that added support using the ZTL module support method. These updates are generated without source modifications to the deployed sensor and enable the sensor to support the new kernel using offset mapping without having to upgrade to a newer sensor version.

> **Note:** Regular sensors are supported for 180 days. Long-term support (LTS) sensors are supported for 365 days. Sensors outside these support windows are not listed in these results.

> **Note:** s390x kernels will have info in the **Base Package Supported** section but not the **ZTL Supported** or **ZTL Module Supported** sections.

Supported kernels overview

In these tables, view an overview of supported kernels by distro. Each table shows this info about each kernel:

- **Kernel**: Release string. Such as `5.10.0-19-cloud-amd64`
- **Version**: Full version string for some kernels. Such as `#1 SMP Debian 5.10.149-2 (2022-10-21)`
- **Architecture**: Such as `x86_64` or `aarch64`
- **Flavor**: Such as `generic`, `default`, `aws`, or `gcp` for some kernels
- **Distro**: Distro version. Such as `debian11`
- **Minimum sensor version**: The minimum Falcon sensor version to support the kernel.
  Note: Regular sensors are supported for 180 days. Long-term support (LTS) sensors are supported for 365 days. Sensors outside these support windows are not listed in these results.

Amazon 2 2018.06
