OPENVPN MAC INSTALLATION & USE PROCEDURE

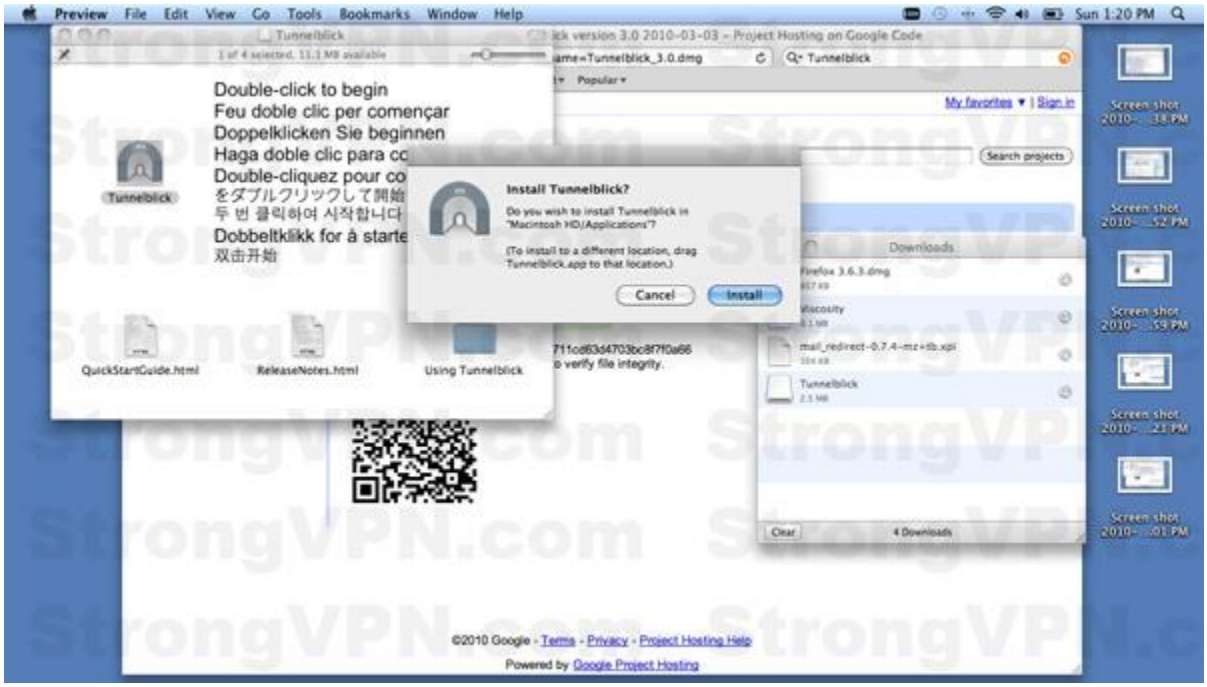

1. Download and install an OpenVPN client for MacOSX from the link: https://tunnelblick.net/downloads.html
2. Open the downloaded disk image file (which mounts the disk image).
3. Follow the instructions and double click on the Tunnelblick Icon

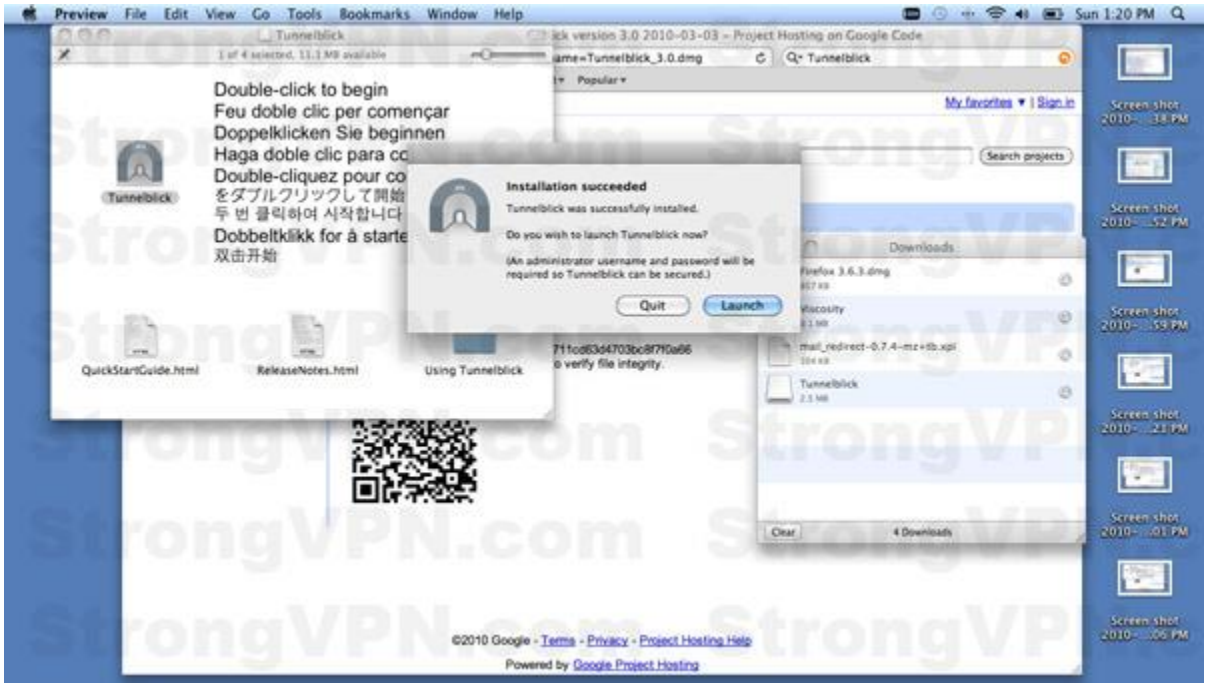

4. Click Open when prompted

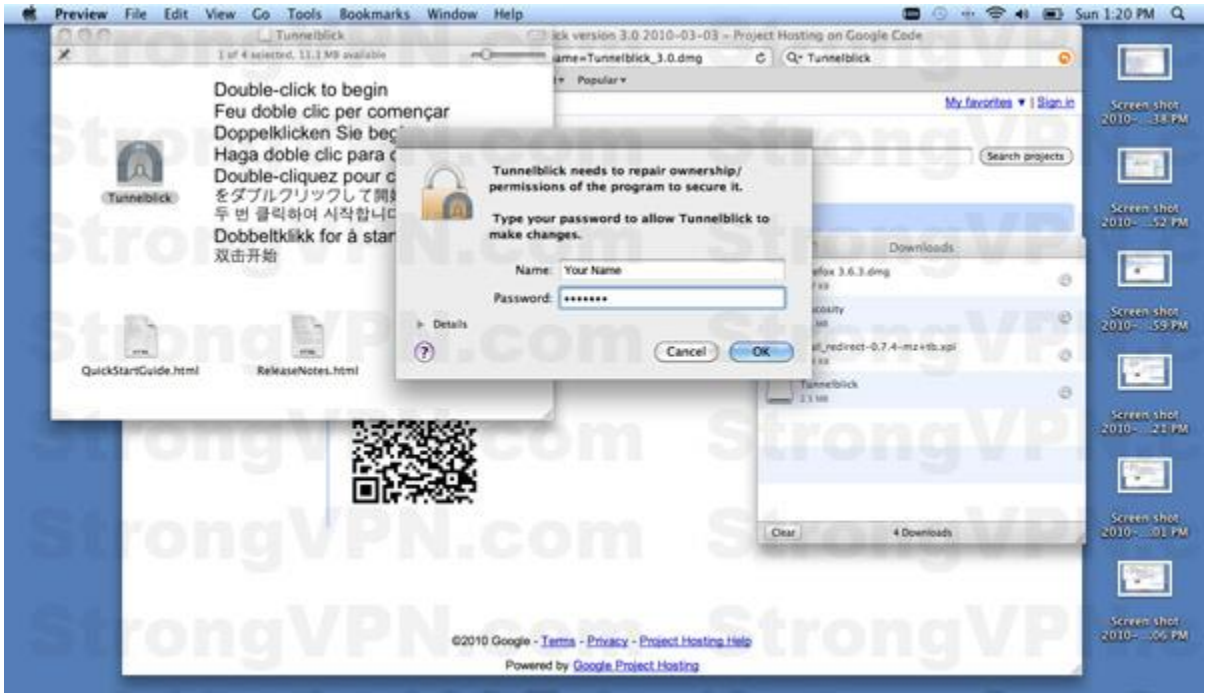

5. Proceed with the Installation

6. When install has finished, launch Tunnelblick

7. Provide your password to allow it to configure the application.

8. When asked if you would like a sample configuration file, go ahead and allow one to be created. We will delete this later.
9. Close the sample config file when it opens.

10. You will see Tunnelblick running in the top tray next to the clock and search icons.

11. Extract the *.ovpn file from the provided zip file.
12. Once it is extracted copy this file to ~/Library/Application Support/Tunnelblick/Configurations
13. Run Tunnelblick by double-clicking its icon in the Applications folder or by clicking on the icon in the top tray.
14. Click connect.
15. Your ID is your email address
16. Your password is your four digit pin and your Datapipe Auth token value.
