1.2.22 Release Notes

1.2.22 Release Information

Last updated: Thursday, 10 April 2008.

Target date for 1.2.22 Release: Thursday, 10 April 2008

These release notes describe Directory Sync Server Edition Release 1.2.22. You can find detailed information on features in the *Directory Sync Server Edition Administration Guide.*

This information is subject to change, and the final release notes will be published the day of the release.

1.2.22 New Features

Release 1.2.22 is the first general audience release of Directory Sync Server Edition.

Directory Sync Server Edition is a utility to synchronize your users in the message security service to match your LDAP server. The directory sync utility runs inside your server environment, and collects user information from your LDAP server and the email security service. Set up flexible, powerful rules for gathering and organizing your user lists from the LDAP server to the message security service, including mapping rules, exclusions, and custom attributes. When you synchronize, the directory sync utility will add, delete, move and rename users on the message security service to match your LDAP server. You can use the directory sync utility with a scheduling program in your server's operating system to run regular scheduled synchronizations.

Directory Sync Server Edition is not a standalone utility. It is used to connect to the message security service and update your registered user list. If you are not subscribed to the message security service with Google or Postini, you will not be able to use the directory sync utility. The directory sync utility will not update or change any of your LDAP directory server data.

1.2.22 Known Issues

The following are known issues in this release. These issues will be resolved in an upcoming maintenance release. Each issue includes a tracking number, description, and workaround (as applicable).

Note: When issues occur, our engineers work as quickly as possible to resolve them, and as release information become available, it will be added to this document.

[1082266] Synchronization: No error when adding mail list without alias attribute

Issue: When a mail list synchronization fails because the alias attribute is not specified, no warning or error is displayed.

Status: This will be resolved in a future release.

[1027309] Configuration Manager: Configuration requires pdefault exclusion rule

Issue: The pdefault user, which is added for every account, is not excluded from synchronization. If no exclusion rule is added, synchronization will atempt to delete the pdefault user and fail.

Workaround: Add the pdefault user in an exclusion rule. This workaround is documented in the Administration Guide.

Status: This will be resolved in a future release.

[1095533] Configuration Manager: Simulate Sync always writes to sync.log

Issue: Configuration Manager will still write to sync.log when simulating a synchronization, rather than the specified log file. Actual synchronization writes to the expected log file.

Status: This will be resolved in a future release.

[1082282] Synchronization: Mailing list exclusion rules not functional

Issue: Exclusion rules for mailing lists are ignored. Mailing lists are added regardless of exclusion Rules

Status: This will be resolved in a future release.
